Applied AI Engineer | LLM agents, RAG and MCP integrations shipped to production on GCP with AI-assisted, test-driven delivery.

SUMMARY

Applied AI engineer who ships LLM agents, RAG assistants and MCP tool servers into regulated production environments. Led a model-migration program that moved 30 production agents to open-weight LLMs and cut monthly model spend ~74%. Builds with AI coding agents (Claude Code, Codex) under engineering discipline: spec-first, test-driven, CI-gated, with 1,500+ test suites, Terraform-managed GCP and keyless CI/CD.

EXPERIENCE

AI Specialist | Netbank, Manila Apr 2026 – Present

- **Led an LLM cost-reduction migration**: selected candidate open-weight models (GLM, Kimi, DeepSeek), chose test agents, ran a 2-week user-acceptance gate per agent, and monitored post-release, moving **30 production Onyx agents** (fraud, AML review, employee assistant) off frontier models and cutting monthly model spend **~74%**.
- Built a **Model Context Protocol (MCP) server** exposing the bank's virtual-banking API as **52 LLM tools generated from 56 OpenAPI operations** (TypeScript, Hono, Zod), with **maker-checker approval** for high-risk actions, OAuth 2.0 client-credentials + PKCE auth relay, Cloud SQL Postgres, and a Pub/Sub-fed write-once Cloud Storage audit trail.
- Gated that MCP server with **1,522 automated tests** (Vitest + Playwright) and shipped it to Cloud Run via **GitHub Actions + Workload Identity Federation** (keyless CI/CD, no stored service-account keys).
- Built **onyx-qa**, a Claude Code subagent team (triage, evaluator, fixer) that QA-scores **~140 enterprise RAG agents** on scheduled weekly/monthly sweeps; 164 pytest tests.
- Shipped the bank's public **RAG customer assistant** (Next.js, OpenAI GPT-4o-mini + embeddings, vector retrieval) on Cloud Run with Cloud Tasks workers, Firestore rate-limits and token budgets, a retrieval eval harness and 6 Cloud Monitoring alerts; later added **OpenRouter**-routed intent classification and post-answer grounding verification with graceful fallback.
- Built a **multi-tenant KYB/KYM/EDD compliance onboarding platform** (TypeScript, Express, React): PostgreSQL with forced **row-level security** (32 migrations), per-tenant **Cloud KMS envelope encryption**, IAP + Identity Platform (SAML) SSO, Claude Sonnet and GPT-4o document assistance, and **Terraform** covering ~60 GCP resource types.
- Built a **fraud-case automation bot** for AFASA (anti-financial-account-scamming law) requests: Playwright retrieval, AES-256-encrypted PDF packs and Gmail drafts for partner banks; Dockerized on Compute Engine with Terraform-managed alerting (19 alert policies); **~2,180 automated tests**; released to production Sep 2026.
- Built a **bank reconciliation app** for InstaPay and PesoNet T+1 reports (FastAPI, React, Cloud Run behind IAP) with **323 pytest tests** plus frontend test suites.

AI Business Analyst (Contract) | CX Labs (AquaSuite), Remote (US) May 2026 – Oct 2026

- Contributed **~1,126 of 3,789 commits** in six weeks to AquaSuite, a multi-location operations SaaS for US swim schools (Python FastAPI, React, PostgreSQL 16 with forced row-level security, Railway).
- Built the **booking-system integration layer** with Playwright and Chrome DevTools Protocol: a reusable data-mirror pattern for 3 source surfaces (Enrollments, Families, Students) with hash-based evidence and repeatable import/verification scripts.
- Translated swim-school operating workflows into requirements and import/verification guidance, and ran **7-location rollout readiness checks** across the NY/NJ/CT Tri-State Area with guardrails: no raw PII handling, no unsupervised production writes.

- Kept migration and test gates green on a codebase with 250+ SQL migrations and ~2,400 automated tests (team totals).

AI Automation & Business Systems Specialist | Bloomsocial Inc. Jul 2025 – Mar 2026

- Built **Bloom Player**, an in-house digital-signage player and CMS for advertising and kiosk content, removing a third-party vendor dependency.
- Developed the **Hollow Box interactive AI kiosk**: conversation flow, model integration, hardware deployment and production tuning for tours and events.

Business Development Intern | Multiware Econ Sales Corp. (MESCO) Jan 2025 – May 2025

Language Assessor | Transnational Education Solutions Team Inc. Feb 2020 – Apr 2024

- Assessed 1,000+ examinees against CEFR standards; coordinated platform issue resolution with local and international teams.

SKILLS

AI & LLM: Anthropic Claude (SDK, Sonnet), OpenAI (GPT-4o, embeddings, structured outputs), open-weight models (GLM, Kimi, DeepSeek; Qwen evaluated), OpenRouter, RAG and vector retrieval, Onyx, Model Context Protocol (MCP) servers, LLM evaluation, model cost optimization, agentic workflows

AI-assisted delivery: Claude Code and Codex multi-agent workflows (planner / builder / reviewer), spec-first, test-driven development

Languages: Python, TypeScript, JavaScript (Node.js), SQL, Bash, PowerShell, Google Apps Script

Backend: FastAPI, Express, Hono, Next.js, Zod, Pydantic, OpenAPI, REST APIs, webhooks

Data: PostgreSQL (row-level security, multi-tenant), Cloud SQL, Firestore, SQLite, Supabase

Cloud & infra (GCP): Cloud Run (services + jobs), Compute Engine, Cloud SQL, Cloud Storage, Pub/Sub, Cloud Tasks, Cloud Scheduler, Secret Manager, Cloud KMS, IAP, Identity Platform, Artifact Registry, Cloud Monitoring; Terraform, Docker, Docker Compose, Railway

CI/CD & security: GitHub Actions, Cloud Build, Workload Identity Federation, OAuth 2.0 / 2.1 + PKCE, OIDC, SAML, maker-checker controls, audit logging

Testing: pytest, Vitest, Playwright, node:test, axe-core, Ruff, ESLint

Automation: n8n, Pipedream, Make, Zapier, Chrome DevTools Protocol, Google Workspace APIs, HubSpot API

Frontend: React, Vite, Tailwind CSS, shadcn/ui

EDUCATION & CERTIFICATIONS

BSBA, Financial Management, Naga College Foundation, 2025, Cum Laude

Google IT Support Professional Certificate (Coursera, 2025)

Lean Six Sigma White Belt (Aveta Business Institute, 2025)
